

Winches

Manual winches with a maximum load of 300 kg and electric rope winches with maximum load of 4,000 kg

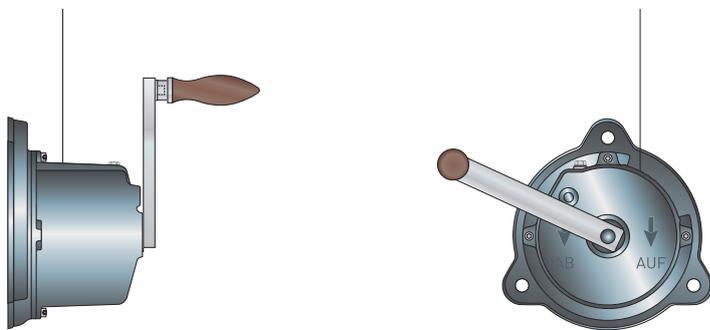

All our models have a sturdy, high-performance construction and are tried and tested in many tough everyday applications. All manual winches have a safety load brake and load-carrying capacity of up to 300 kg.

Our electrical winches are capable of extremely high performance and have load-carrying capacity of between 220 kg and 4,000 kg depending on the individual model. A powerful three-phase motor, up to 3 pulleys, adjustable lifting limitation, including inductive slack rope switch and emergency manual operation, make these winches into easy-to-operate components for mounting alongside the upper unit of the loading system, or on a wall, ceiling or floor. All electric winches are also available as **explosion-proof** models.

WH1 Manual rope winch

Maximum load of 125 kg with safety load brake

Manual winch characteristics:

With load pressure brake:
The load is securely held in all positions

Rope fastening with a bore and grub screw

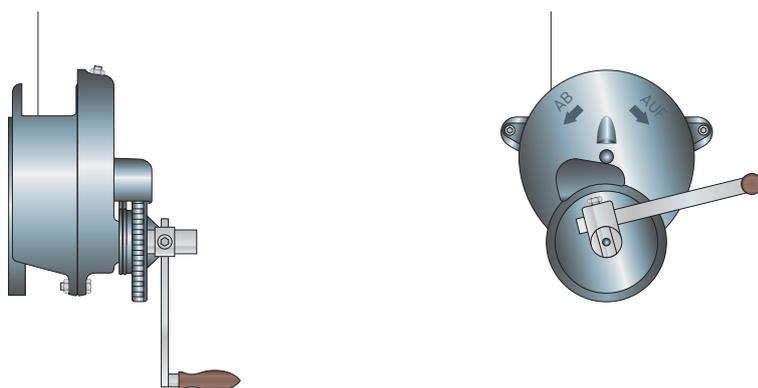

All bearing positions are maintenance free

Removable handle with four-sided insert and ball-locking mechanism

Location of rope output can be adjusted in any direction by simply turning the housing as required

WH3L Manual rope winch

Maximum load of 300 kg with safety load brake

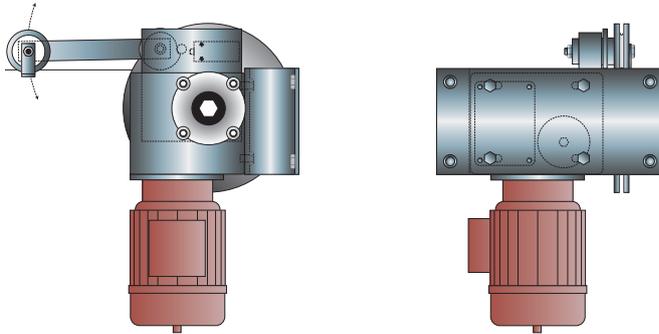

Wall-mounted winches are designed in accordance with drive mechanism group 1B and certified in accordance with accident prevention regulations (under AZH II 27 and 27/80)

Available with fold-up crank handle on request

Can also be treated to withstand extreme environmental conditions

L51 Electric rope winch

Maximum load of 125 kg with one pulley

Electric rope winch characteristics:

Attached three-phase motor

Built-in, adjustable hoist limitation system to limit up or down travel

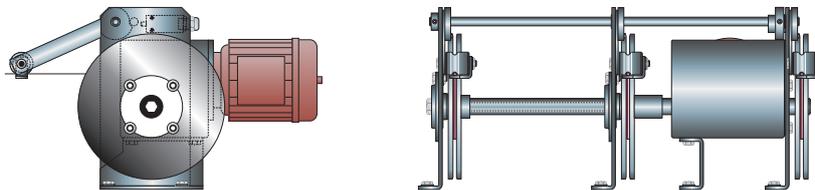

Included inductive slack rope switch

Emergency manual use

Painted housing

L53 Electric rope winch

Maximum load of 200 kg to 600 kg with three pulleys

Electric rope winch characteristics:

Attached three-phase motor

Built-in, adjustable hoist limitation system to limit up or down travel

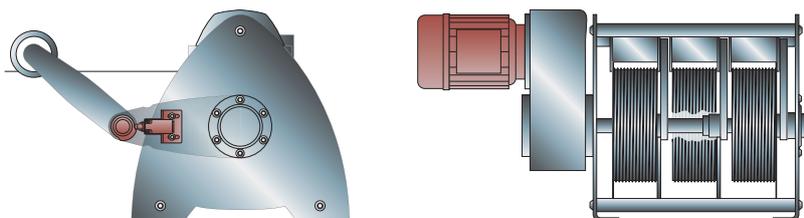

Included inductive slack rope switch

Emergency manual use

Painted housing

Electric rope winch

Maximum load of 500 kg to 4,000 kg

Electric rope winch characteristics:

Attached three-phase motor

Built-in, adjustable hoist limitation system to limit up or down travel

Oversized cable drum

Externally fitted slack rope switch

Painted housing
